

Operation of NUIT Deployed Cameras in NUIT Managed Audio-Visual Venues

1. Introduction

Since 2006 NUIT has deployed low-quality, video-only, network based cameras in its managed teaching, seminar and meeting rooms to assist in the administration of audio-visual facilities in such venues. They are generally located at the rear of each room, offering a fixed single view of the main display device, image and AV lectern.

2. Purpose of Cameras

- a. To facilitate efficient diagnosis and resolution of audio-visual faults;
- b. To assist in meeting the University's sustainability policy (and extend the lifetime of audio-visual equipment) by permitting remote monitoring of room usage and powering down audio-visual equipment where appropriate;
- c. To assist the University's timetabling team in remotely carrying out space usage audits.

3. Use of Cameras

- a. Images from cameras are only viewed in line with the purpose stated above;
- b. There is no facility to record images from cameras;
- c. The cameras have no audio capability (i.e. there is no microphone);
- d. Cameras are deployed on a secure network; access is password protected and available to a restricted number of staff in NUIT and the timetabling team;
- e. Images are viewed within a 320x240 pixel window;
- f. Is consistent with the Information Commissioner's Office CCTV Code of Practice.
